- Web Services overview
 - SOAP
 - WSDL
 - UDDI
- Exercise – Web Tools Platform (WTP) Eclipse
 - Invocation of WSDL web services
 - Design of WSDL files

Web Services

- Web services are yet another approach to distributed systems
 - Using open protocols
 - Self-contained and self-describing
 - Can be discovered using UDDI
- XML is the basis for Web services

- The basic Web services platform is XML + HTTP
- XML provides a language which can be used between different platforms and programming languages and still express complex messages and functions
- The HTTP protocol is the most used Internet protocol
- Web services platform elements:
 - (i) SOAP (Simple Object Access Protocol)
 - (ii) WSDL (Web Services Description Language)
 - (iii) UDDI (Universal Description, Discovery and Integration)

- SOAP is an XML-based protocol to let applications exchange information

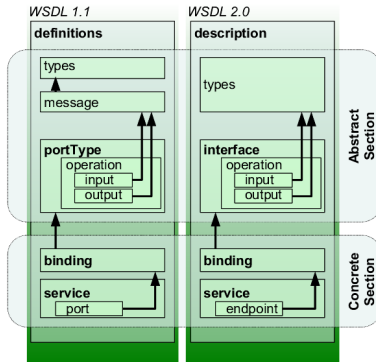

```
POST /InStock HTTP/1.1
Host: www.example.org
Content-Type: application/soap+xml; charset=utf-8
Content-Length: nnn
```

```
<?xml version="1.0"?>
<soap:Envelope
  xmlns:soap="http://www.w3.org/2001/12/soap-envelope"
  soap:encodingStyle="http://www.w3.org/2001/12/soap-encoding">

  <soap:Body xmlns:m="http://www.example.org/stock">
    <m:GetStockPrice>
      <m:StockName>IBM</m:StockName>
    </m:GetStockPrice>
  </soap:Body>

</soap:Envelope>
```

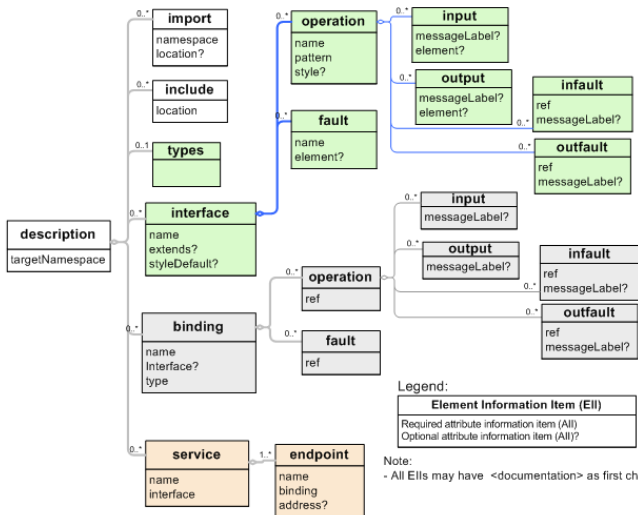

- WSDL is a document written in XML describing a Web service
- It specifies the location of the service and the operations (or methods) the service exposes

The data types used
by the web service

The operations performed
by the web service

The communication protocols used
by the web service

- UDDI is a platform-independent framework for **describing** services, **discovering** businesses, and **integrating** business services by using the Internet
- UDDI is a directory service where companies can register and search for Web services
- Problems the UDDI specification can help to solve, for example:
 - (i) Making it possible to discover the right business from the millions currently online
 - (ii) Solving customer-driven need to remove barriers to allow for rapid participation in the global Internet economy
 - (iii) Describing services and business processes programmatically in a single, open, and secure environment

Exercises

Assignment:

1. Download the worksheet from the course webpage
2. Complete the exercises in the worksheet
3. Send it to the tutors (ws1516@sti2.at) before the next two sessions

Thank You
