- Mario Zelger 1315417

Topic

Touristic service packaging for hiking tours and public transport in Innsbruck by using "Hiking and Transportation in Innsbruck (HATI)" Application.

Identified services

Enumerate the high-level services that you plan to develop or access (already existing services on the Web)

Access information about hiking tours around Innsbruck.

Provide possible hiking routes and how to get to there by public transport.

Recommend specific routes based on weather forecasts.

Possible packaging solution

Try to identify if there is a publicly consumable API and find any possible service composition, such as hotels and ski tours, hotels and music concerts, etc.
